

Appendix N

Phase 1 Environmental Site Assessment

**Phase I Environmental Site Assessment
Brunswick Meadows Development
18.3-acre parcel
NYS Route 142
Town of Brunswick, New York**

Introduction

Purpose The objective of this Phase I Environmental Site Assessment (ESA) was to identify recognized environmental conditions connected with the subject site property.

The potential for a release, past release or material threat of a release of hazardous substances or petroleum products into structures or into the ground, ground water or surface water of the subject site property was evaluated.

Scope The scope of services comprised visual observation of site conditions during a one-time site visit performed on March 8, 2007; review of readily available information on historical site usage, surface and subsurface conditions; and information provided by individuals, public agencies and others.

This report was prepared in general conformance with the American Society for Testing Materials (ASTM) *Standard Practice for Environmental Site Assessment: Phase I Environmental Site Assessments* (Standard Designation E 1527-05), and is valid for a period of six months from the date of the site visit.

Site Location

General The site is located about 330 feet south of the intersection of Grange Road and Haleah Drive in the Town of Brunswick, New York (Figure 1) [1].

Address NYS Route 142 (Grange Road)
Brunswick, New York 12182

Town Brunswick

County Rensselaer

State New York

Site Description

Property The subject property currently comprises about 18.3 acres of undeveloped land (Tax Map Parcel No. 80.00-2-3.1), which is planned for development into a residential condominium community of 31 buildings totaling 124 dwelling units with a single access road to the nearby NYS Route 142 (Grange Road) (Figure 2; Photographs in Appendix A) [2]. The existing site is an undeveloped lot with open fields surrounded by hedge rows on the north and south and a wooded area that slopes to the west toward the existing stream corridor.

No buildings, spills of hazardous materials or petroleum products were observed on the site, although the visibility of the ground surface was impaired by the presence of several feet of snow cover on the site. In general, there were no signs of environmental impairment observed during the site visit.

Boundaries The subject parcel comprises an unfenced, irregular-shaped area of cleared areas, hedge rows and wooded areas approximately 18.3 acres in size [2].

Abutters North: The north edge of the subject parcel is bounded by a residential area along Haleah Drive along the south edge of the Lansingburgh Reservoir (Figures 1 and 2) [1,2].

East: The eastern edge of the subject parcel is bounded by three residences along Grange Road, opposite of which is a residence and wooded areas (Figures 1 and 2) [1,2].

South: The south edge of the subject parcel is bordered largely by undeveloped, open fields and wooded areas (Figures 1 and 2) [1,2].

West: The western edge of the subject parcel is bordered by undeveloped open fields and wooded areas (Figures 1 and 2) [1,2].

Neighborhood A portion of the site totaling 3.5 acres (400 feet west from NYS Route 142) is currently zoned 'R-15 Residential', whereas the remainder of the site is zoned 'A-40 Agricultural' [3].

Site History

Prior Site Usage According to the title summary prepared by the owner, and communication with the owner, the subject property (18.3-acres) in addition to an adjoining parcel, was acquired in 2004 by TOPATOMA, LLC from the Dr. Gerald A. Ripp Trust, which was formed in 2000 following the execution of his last will and testament [4]. Gerald A. Ripp had acquired the property from the North Hills Realty Corporation in 1978, which had purchased the property in 1966 from the estate of Stephen J. Lansing, who had owned it since 1933. The Lansing Farm reportedly had historically comprised a nearly 100-acre parcel with dairy cows, hay, corn and potato fields.

Sanborn Fire Insurance Maps were not available for the subject property.

Aerial photographs of the subject property and vicinity dating from 1968, 1979, 1995 and 2004 were reviewed (Appendix B) [5]. The photograph dating from 1968 shows the property as mostly cleared and probably used as a hayfield. The 1979, 1995, and 2004 photographs show the property with two large clearings probably used for hay cultivation, and the remaining areas overgrown with weeds, brush, hedges and trees.

Environmental Considerations

General Observations	No unusual stains, stressed vegetation, spills, odors, pits, mounds, or evidence of excavations, ponds, or lagoons were observed during the site visit of the subject parcel.
Water Supply	There are no water wells on the subject parcel.
Waste Water	No sanitary wastewater is associated with the subject parcel.
Storm Water	Storm water from the subject parcel area probably infiltrates into the ground or drains north and west across the site.
Air Emissions	None identified with the subject parcel.
Heating/Cooling	No heating or cooling systems are currently identified with the subject parcel.
Hazardous Materials	No hazardous materials are identified with the subject parcel.
ASTs	No above ground storage tanks (ASTs) are identified with the subject parcel.
USTs	No underground storage tanks are reported to exist on the subject parcel [4].
Solid Waste	No solid waste has been or is being generated from the subject parcel.
Hazardous Waste	No hazardous waste is identified with the subject parcel, according to site observations and the attached EDR Radius Map Report (Appendix C) [6].
PCBs	No electrical transformers were observed on the subject parcel.

Physical Setting

Physiography	The site is located in the Hudson-Mohawk Valley physiographic province [7,8].
Topography	The topography of the subject parcel slopes gently to the west from NYS Route 142 toward the stream that leads northward to the Lansingburgh Water Works Storage Reservoir (Figure 1) [1].

- Elevation** The ground elevation of the subject parcel ranges from approximately 310 to 340 feet above mean sea level (Figure 2) [2].
- Geology** Published data indicate the site area to be underlain by the Cambrian Nassau Formation composed of slate, shale, quartzite and conglomerate, the Cambrian Germantown Formation composed of shale, conglomerate and limestone, and the Ordovician Stuyvestant Falls Formation comprised of shale and siltstone [9].
- Overburden** The overburden is mapped as kame deposits, which includes kames, eskers, kame terraces, kame deltas, and is described as comprised of coarse to fine gravel and/or sand which has lateral variability in sorting, coarseness and thickness, locally firmly cemented with calcareous cement and of variable thickness (33 to 99 feet) [10].
- Soils** The surface soil is mapped as comprised of several types including the following soils. The Bernardston-Nassau complex, rolling (8 to 15% slopes), comprised of well drained, loamy, acid, dense till derived mainly from phyllite, shale, slate and schist. The Shaker very fine sandy loam, described as poorly drained, 0-3% slopes, formed in loamy over clayey glaciolacustrine or glaciomarine deposits. The Elmridge very fine sandy loam (3 to 8% slopes) comprised of moderately well drained, loamy over clayey glaciolacustrine or marine deposits formed on lake plains. The Hudson silt loam, steep (25 to 35% slopes) is described as consisting of moderately well drained clayey and silty glaciolacustrine deposits. The Fluvaquents-Udiffluents complex (0 to 3% slopes) is described as poorly drained alluvium of highly variable texture formed on flood plains. The Bernardston-Nassau complex, rolling (8 to 15% slopes) is described as well drained, loamy, acid, dense till derived mainly from phyllite, shale, slate and schist formed on drumlinoid ridges, hills and till plains [11].
- Surface Water** A perennial, north-flowing, unnamed stream is located along the west side of the subject parcel to the Lansingburgh Reservoir to the north (Figures 1 and 2) [1,2].
- Wetlands** According to the EDR Radius Map Report, there are two designated Federal freshwater wetlands on the subject parcel [6]. One is located along the western edge of the property and consists of the stream and vegetative buffer. This wetland will reportedly be preserved in its current state. The second wetland is located in the approximate middle of the property and drains to the Lansingburgh Water Works Storage Reservoir to the north. The site does not contain any NYSDEC mapped wetlands [3].
- Ground Water** No information regarding ground water quality or flow direction was identified, although based on the regional topographic gradient; it is probable that ground water flow direction may be to the west and north beneath the subject parcel.

Government Agency Information

Federal Database

Federal records reviewed included information provided by Environmental Data Resources, Inc. (EDR) from the following ASTM and non-ASTM sources [6]:

- National Priorities List (NPL)
- Proposed National Priorities List (NPL)
- Delisted National Priorities Site (Delisted NPL)
- Federal Superfund Liens (NPL Recovery)

Note: - = Search distance exceeds search parameters

A total of 1 HSWDS facility, 1 SHWS facility, 3 LTANKS and 3 HIST LTANKS sites are located within a one-half mile radius of the subject property [6]. All of the listed spills are closed. The HSWDS and SHWS listings above were identified from the list of unmapped 'orphan' sites and pertain to the 'Old Troy Municipal Incinerator' on Route 40 (Oakwood Avenue). This site is

reportedly located southwest of the proposed development, in an apparently side gradient location. None of these sites, including the former incinerator site, based on their probable relative location, appear to present a risk to the subject property.

A total of 40 unmapped 'orphan' sites were identified by EDR, including: 23 NY Spills sites, 19 NY Hist Spills sites, 3 RCRA Small Quantity Generators, 3 FINDS sites, 2 NY Manifest facilities, 6 LTANKS sites, 3 HIST LTANKS sites, 1 HWDS facility, 3 SHWS facilities, 2 SWF/LF facilities, and 1 FTTS site [6]. None of the orphan sites, based on their probable relative location, appear to present a risk to the subject property.

A Freedom of Information Law request was submitted to the NYSDEC Region 4 office on March 8, 2007 [12]. No response was received at the writing of this report.

Conclusions

Based on publicly available historical information provided by the property owner and other sources of information, the existing 18.3-acre property which is comprised of undeveloped open fields, hedge rows and woodland was formerly used as part of a farm. No indications of the current storage, handling or disposal of hazardous substances or petroleum products on the subject parcel were encountered during the site inspection. Furthermore, no evidence of spills, discharges or PCBs was observed on the subject parcel.

It is the opinion of EIS that based on the information reviewed during the Phase I Environmental Site Assessment, the potential for the subject parcel property to be impacted by recognized environmental conditions either from on-site sources or potential off-site sources of contamination is low. No historic or current recognized environmental conditions associated with the subject parcel were discovered. Therefore, based on the information presented in this report, there is no indication that further investigation is required.

Limitations

EIS performed a Phase I ASTM Environmental Site Assessment for Erdman Anthony and Associates, Inc.

As stated in section 4.5.1 of the ASTM Standard, “no environmental site assessment can wholly eliminate uncertainty regarding the potential for recognized environmental conditions in connection with the property.” The performance of this environmental site assessment “is intended to reduce, but not eliminate, uncertainty regarding the potential for recognized environmental conditions in connection with the property, and recognizes reasonable limits of time and cost.”

The ASTM Standard defines the term “recognized environmental conditions” as “the presence, or likely presence, of hazardous substances or petroleum products on the property under conditions that indicate an existing release, a past release, or a material threat of a release of hazardous substances or petroleum products into structures on the property or into the ground, groundwater, or surface water of the property.”

This environmental site assessment report represents appropriate inquiry, as defined by the ASTM Standard and the opinion of the Environmental Professional, to determine whether recognized environmental conditions are associated with the site in such a manner as to cause significant potential future environmental liability associated with the site. It does not represent a comprehensive characterization of the site and is not intended to include *de minimis* conditions that generally do not present a material risk of harm to the public health or to the environment and that would not be the subject of an enforcement action by appropriate government agencies if brought to their attention.

This study was undertaken and completed in accordance with the professional standards and generally accepted practices of environmental consultants at the time of preparation of this study. The scope of services for this assessment was limited and should not be construed as a guarantee that no currently unrecognized environmental concerns exist at the site; the study was not intended to be a definitive investigation of potential environmental concerns at the subject property.

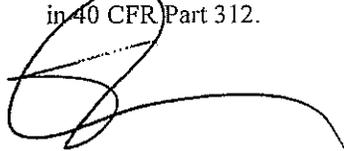

EIS exercised due and customary care in the conduct of its assessment but did not independently verify information provided by others. Therefore, EIS assumes no liability for any loss resulting from errors or omissions arising from the use of inaccurate/incomplete information or misrepresentations made by others.

This report is intended for the sole use of TOPATOMA, LLC, exclusively for the purpose outlined herein at the site location and project indicated. The scope of services performed in this assessment may not be appropriate to satisfy the needs of other users, and any use or re-use of this document or the findings, conclusions, or recommendations presented, is at the sole risk of the user.

Opinions, conclusions or recommendations presented herein apply to the site conditions existing at the time of the assessment and those reasonably foreseeable. They cannot necessarily apply to site changes of which EIS is not aware and has not had the opportunity to evaluate.

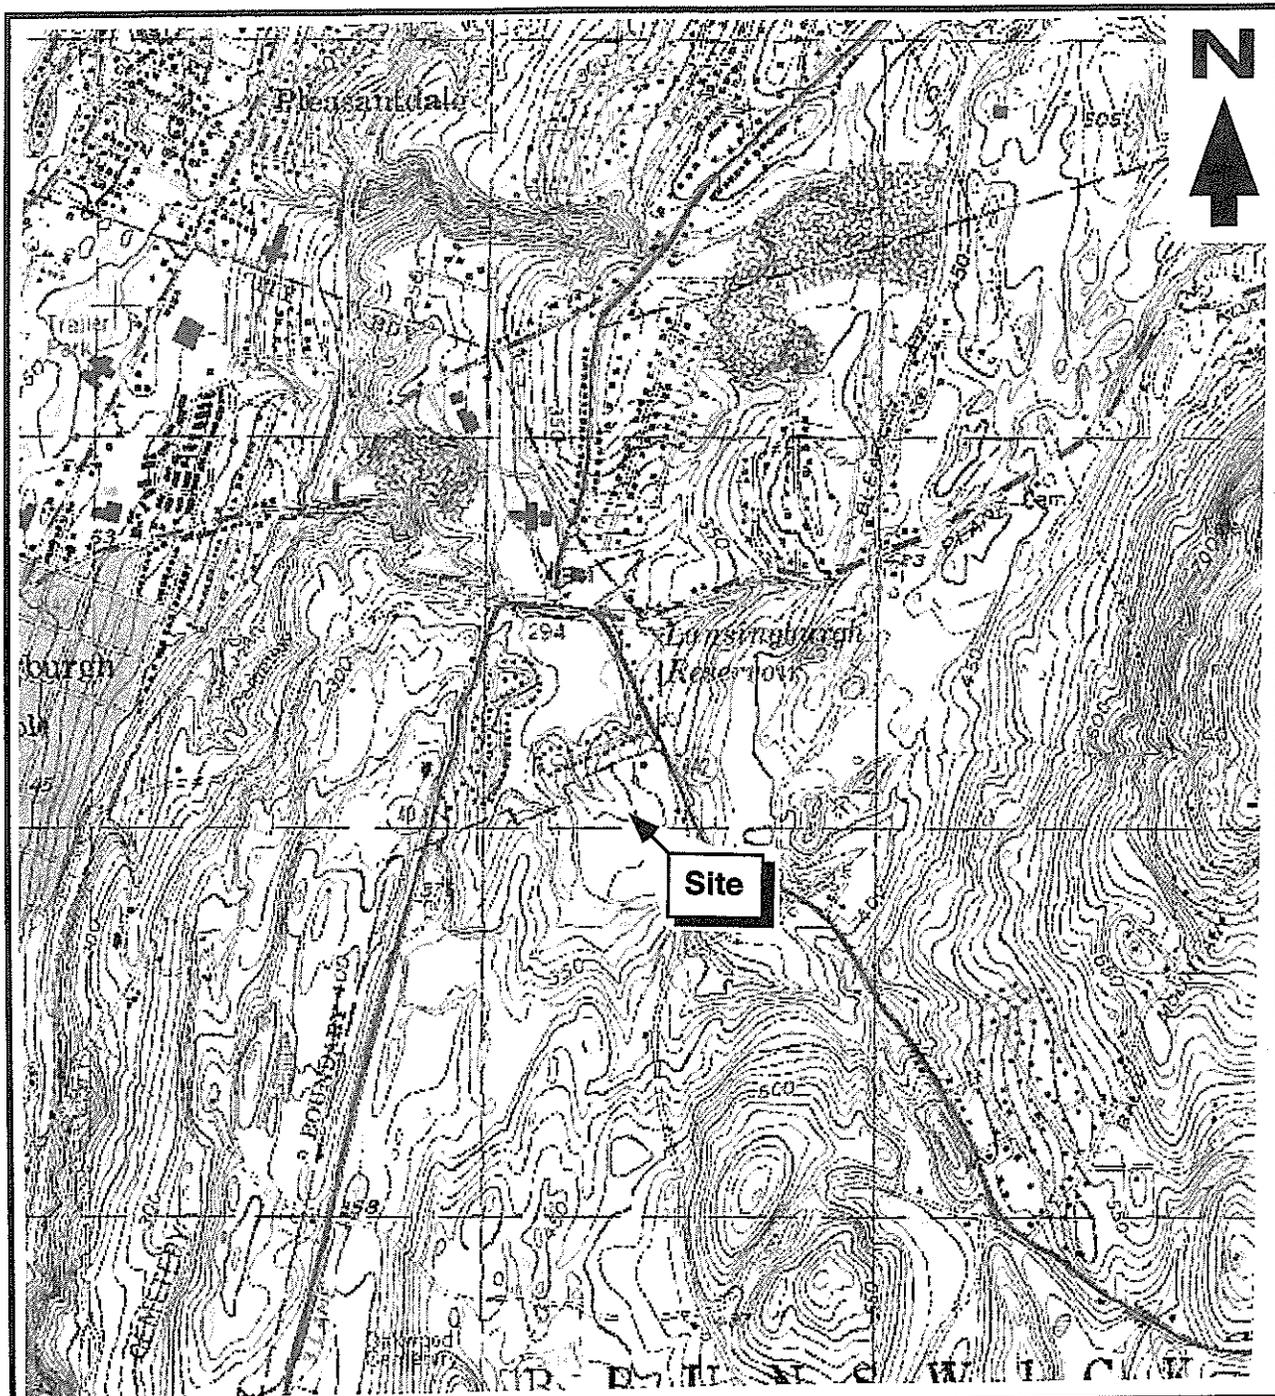

Signature of Environmental Professional

I declare that, to the best of my professional knowledge and belief, that my qualifications meet the definition of *Environmental Professional* as defined in 312.10 of 40 CFR 312. The specific qualifications have been met based on education, training, and experience to assess a property of the nature, history and setting of the subject property. EIS, Inc. has developed and performed all appropriate inquiries in conformance with the standards and practices set forth in 40 CFR Part 312.

EXECUTIVE SUMMARY

A search of available environmental records was conducted by Environmental Data Resources, Inc (EDR). The report was designed to assist parties seeking to meet the search requirements of EPA's Standards and Practices for All Appropriate Inquiries (40 CFR Part 312), the ASTM Standard Practice for Environmental Site Assessments (E 1527-05) or custom requirements developed for the evaluation of environmental risk associated with a parcel of real estate.

SURROUNDING SITES: SEARCH RESULTS

Surrounding sites were identified in the following databases.

Elevations have been determined from the USGS Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified. Sites with an elevation equal to or higher than the target property have been differentiated below from sites with an elevation lower than the target property. Page numbers and map identification numbers refer to the EDR Radius Map report where detailed data on individual sites can be reviewed.

Sites listed in *bold italics* are in multiple databases.

Unmappable (orphan) sites are not considered in the foregoing analysis.

STATE AND LOCAL RECORDS

LTANKS: Leaking Storage Tank Incident Reports. These records contain an inventory of reported leaking storage tank incidents reported from 4/1/86 through the most recent update. They can be either leaking underground storage tanks or leaking aboveground storage tanks. The causes of the incidents are tank test failures, tank failures or tank overfills

A review of the LTANKS list, as provided by EDR, and dated 09/14/2006 has revealed that there are 3 LTANKS sites within approximately 0.5 miles of the target property.

HIST LTANKS: A listing of leaking underground and aboveground storage tanks. The causes of the incidents are tank test failures, tank failures or tank overfills. In 2002, the Department of Environmental Conservation stopped providing updates to its original Spills Information Database. This database includes fields that are no longer available from the NYDEC as of January 1, 2002. Current information may be found in the NY LTANKS database.

A review of the HIST LTANKS list, as provided by EDR, and dated 01/01/2002 has revealed that there are 3 HIST LTANKS sites within approximately 0.5 miles of the target property.

DEC Remarks:

Start DECRemark - 9413219 Prior to Sept, 2004 data translation this spill Lead
DEC Field was "KOKOCKI" fuel oil tank removal at a former mobil gas station.
some contamination from the heating oil tank was discovered. approx. 15 tons
of contaminated soil was removed. the pile remains onsite as of 11/95. Mobil
did a minor investigation that revealed a couple of significantly contaminated
spots. no further work since Spring '95. Soils letter sent 12/95. wb
responsible parties: bothMobil and Mrs Williams. 5/28/96 THE DEPARTMENT
RECEIVED A REPORT FROM MOBIL DATED 5-24-96. THE REPORT INDICATED THAT THE
MAJORITY OF PETROLEUM CONTAMINATED SOIL EXCEEDING THE STARS MEMO #1 GUIDANCE
CRITERIA HAD BEEN REMOVED FROM SITE AND INCINERATED. CONFIRMATION SAMPLING
SHOWED THAT THE REMEDIATION WAS SATISFACTORY. MR. BLAIN HAS BEEN BY THE SITE
AND THE PREVIOUSLY STOCKPILED PETROLEUM CONTAMINATED SOIL WAS ALSO REMOVED.
7/2/96 THE SAMPLING DATA SUBMITTED IN THE REPORT SHOWED ONE AREA OF THE
EXCAVATION SLIGHTLY EXCEEDING THE STARS MEMO #1 GUIDANCE VALUES OF 5 PPB. TANK
PIT COMPOSIT #10, N-PROPYLBENZENE 6.3 PPB, 1,3,5-TRIMETHYLBENZENE 9.8 PPB,
1,2,4-TRIMETHYLBENZENE 5.7 PPB AND N-BUTYLBENZENE 22 PPB. BASED ON THIS
INFORMATION NO FURTHER INVESTIGATION/REMEDATION WILL BE REQUIRED BY THE
DEPARTMENT, THE SITE WILL BE CLOSED BUT NOT MEETING STANDARDS. END

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

To maintain currency of the following federal and state databases, EDR contacts the appropriate governmental agency on a monthly or quarterly basis, as required.

Number of Days to Update: Provides confirmation that EDR is reporting records that have been updated within 90 days from the date the government agency made the information available to the public.

FEDERAL RECORDS

NPL: National Priority List

National Priorities List (Superfund). The NPL is a subset of CERCLIS and identifies over 1,200 sites for priority cleanup under the Superfund Program. NPL sites may encompass relatively large areas. As such, EDR provides polygon coverage for over 1,000 NPL site boundaries produced by EPA's Environmental Photographic Interpretation Center (EPIC) and regional EPA offices.

Date of Government Version: 09/27/2006	Source: EPA
Date Data Arrived at EDR: 11/01/2006	Telephone: N/A
Date Made Active in Reports: 11/22/2006	Last EDR Contact: 01/31/2007
Number of Days to Update: 21	Next Scheduled EDR Contact: 04/30/2007
	Data Release Frequency: Quarterly

Proposed NPL: Proposed National Priority List Sites

A site that has been proposed for listing on the National Priorities List through the issuance of a proposed rule in the Federal Register. EPA then accepts public comments on the site, responds to the comments, and places on the NPL those sites that continue to meet the requirements for listing.

Date of Government Version: 09/27/2006	Source: EPA
Date Data Arrived at EDR: 11/01/2006	Telephone: N/A
Date Made Active in Reports: 11/22/2006	Last EDR Contact: 02/23/2007
Number of Days to Update: 21	Next Scheduled EDR Contact: 04/30/2007
	Data Release Frequency: Quarterly

DELISTED NPL: National Priority List Deletions

The National Oil and Hazardous Substances Pollution Contingency Plan (NCP) establishes the criteria that the EPA uses to delete sites from the NPL. In accordance with 40 CFR 300.425.(e), sites may be deleted from the NPL where no further response is appropriate.

Date of Government Version: 09/27/2006	Source: EPA
Date Data Arrived at EDR: 11/01/2006	Telephone: N/A

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

NPL RECOVERY: Federal Superfund Liens

Federal Superfund Liens. Under the authority granted the USEPA by CERCLA of 1980, the USEPA has the authority to file liens against real property in order to recover remedial action expenditures or when the property owner received notification of potential liability. USEPA compiles a listing of filed notices of Superfund Liens.

Date of Government Version: 10/15/1991	Source: EPA
Date Data Arrived at EDR: 02/02/1994	Telephone: 202-564-4267
Date Made Active in Reports: 03/30/1994	Last EDR Contact: 02/19/2007
Number of Days to Update: 56	Next Scheduled EDR Contact: 05/21/2007
	Data Release Frequency: No Update Planned

CERCLIS: Comprehensive Environmental Response, Compensation, and Liability Information System

CERCLIS contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). CERCLIS contains sites which are either proposed to or on the National Priorities List (NPL) and sites which are in the screening and assessment phase for possible inclusion on the NPL.

Date of Government Version: 11/28/2006	Source: EPA
Date Data Arrived at EDR: 12/19/2006	Telephone: 703-603-8960
Date Made Active in Reports: 01/29/2007	Last EDR Contact: 12/19/2006
Number of Days to Update: 41	Next Scheduled EDR Contact: 03/19/2007
	Data Release Frequency: Quarterly

CERCLIS-NFRAP: CERCLIS No Further Remedial Action Planned

Archived sites are sites that have been removed and archived from the inventory of CERCLIS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list this site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. This decision does not necessarily mean that there is no hazard associated with a given site; it only means that, based upon available information, the location is not judged to be a potential NPL site.

Date of Government Version: 12/20/2006	Source: EPA
Date Data Arrived at EDR: 01/29/2007	Telephone: 703-603-8960
Date Made Active in Reports: 02/27/2007	Last EDR Contact: 12/18/2006
Number of Days to Update: 29	Next Scheduled EDR Contact: 03/19/2007
	Data Release Frequency: Quarterly

CORRACTS: Corrective Action Report

CORRACTS identifies hazardous waste handlers with RCRA corrective action activity.

Date of Government Version: 01/04/2007	Source: EPA
Date Data Arrived at EDR: 01/18/2007	Telephone: 800-424-9346
Date Made Active in Reports: 02/27/2007	Last EDR Contact: 12/04/2006
Number of Days to Update: 40	Next Scheduled EDR Contact: 03/05/2007
	Data Release Frequency: Quarterly

RCRA: Resource Conservation and Recovery Act Information

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. RCRAInfo replaces the data recording and reporting abilities of the Resource Conservation and Recovery Information System (RCRIS). The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Conditionally exempt small quantity generators (CESQGs) generate less than 100 kg of hazardous waste, or less than 1 kg of acutely hazardous waste per month. Small quantity generators (SQGs) generate between 100 kg and 1,000 kg of hazardous waste per month. Large quantity generators (LQGs) generate over 1,000 kilograms (kg) of hazardous waste, or over 1 kg of acutely hazardous waste per month. Transporters are individuals or entities that move hazardous waste from the generator off-site to a facility that can recycle, treat, store, or dispose of the waste. TSDFs treat, store, or dispose of the waste.

Date of Government Version: 06/13/2006	Source: EPA
Date Data Arrived at EDR: 06/28/2006	Telephone: 800-424-9346
Date Made Active in Reports: 08/23/2006	Last EDR Contact: 02/27/2007
Number of Days to Update: 56	Next Scheduled EDR Contact: 04/16/2007
	Data Release Frequency: Quarterly

ERNS: Emergency Response Notification System

Emergency Response Notification System. ERNS records and stores information on reported releases of oil and hazardous substances.

Date of Government Version: 12/31/2005	Source: National Response Center, United States Coast Guard
Date Data Arrived at EDR: 01/12/2006	Telephone: 202-260-2342

US ENG CONTROLS: Engineering Controls Sites List

A listing of sites with engineering controls in place. Engineering controls include various forms of caps, building foundations, liners, and treatment methods to create pathway elimination for regulated substances to enter environmental media or effect human health.

Date of Government Version: 10/18/2006	Source: Environmental Protection Agency
Date Data Arrived at EDR: 12/14/2006	Telephone: 703-603-8905
Date Made Active in Reports: 01/11/2007	Last EDR Contact: 01/02/2007
Number of Days to Update: 28	Next Scheduled EDR Contact: 04/02/2007
	Data Release Frequency: Varies

US INST CONTROL: Sites with Institutional Controls

A listing of sites with institutional controls in place. Institutional controls include administrative measures, such as groundwater use restrictions, construction restrictions, property use restrictions, and post remediation care requirements intended to prevent exposure to contaminants remaining on site. Deed restrictions are generally required as part of the institutional controls.

Date of Government Version: 01/24/2007	Source: Environmental Protection Agency
Date Data Arrived at EDR: 01/31/2007	Telephone: 703-603-8905

	Data Release Frequency: Varies

US BROWNFIELDS: A Listing of Brownfields Sites

Included in the listing are brownfields properties addresses by Cooperative Agreement Recipients and brownfields properties addressed by Targeted Brownfields Assessments. Targeted Brownfields Assessments-EPA's Targeted Brownfields Assessments (TBA) program is designed to help states, tribes, and municipalities--especially those without EPA Brownfields Assessment Demonstration Pilots--minimize the uncertainties of contamination often associated with brownfields. Under the TBA program, EPA provides funding and/or technical assistance for environmental assessments at brownfields sites throughout the country. Targeted Brownfields Assessments supplement and work with other efforts under EPA's Brownfields Initiative to promote cleanup and redevelopment of brownfields. Cooperative Agreement Recipients-States, political subdivisions, territories, and Indian tribes become Brownfields Cleanup Revolving Loan Fund (BCRLF) cooperative agreement recipients when they enter into BCRLF cooperative agreements with the U.S. EPA. EPA selects BCRLF cooperative agreement recipients based on a proposal and application process. BCRLF cooperative agreement recipients must use EPA funds provided through BCRLF cooperative agreement for specified brownfields-related cleanup activities.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

UMTRA: Uranium Mill Tailings Sites

Uranium ore was mined by private companies for federal government use in national defense programs. When the mills shut down, large piles of the sand-like material (mill tailings) remain after uranium has been extracted from the ore. Levels of human exposure to radioactive materials from the piles are low; however, in some cases tailings were used as construction materials before the potential health hazards of the tailings were recognized.

	Data Release Frequency: Varies

CDL: Clandestine Drug Labs

A listing of clandestine drug lab locations. The U.S. Department of Justice ("the Department") provides this web site as a public service. It contains addresses of some locations where law enforcement agencies reported they found chemicals or other items that indicated the presence of either clandestine drug laboratories or dumpsites. In most cases, the source of the entries is not the Department, and the Department has not verified the entry and does not guarantee its accuracy. Members of the public must verify the accuracy of all entries by, for example, contacting local law enforcement and local health departments.

Date of Government Version: 12/01/2006	Source: Drug Enforcement Administration
Date Data Arrived at EDR: 01/08/2007	Telephone: 202-307-1000

RAATS: RCRA Administrative Action Tracking System

RCRA Administration Action Tracking System. RAATS contains records based on enforcement actions issued under RCRA pertaining to major violators and includes administrative and civil actions brought by the EPA. For administration actions after September 30, 1995, data entry in the RAATS database was discontinued. EPA will retain a copy of the database for historical records. It was necessary to terminate RAATS because a decrease in agency resources made it impossible to continue to update the information contained in the database.

STATE AND LOCAL RECORDS

HSWDS: Hazardous Substance Waste Disposal Site Inventory

The list includes any known or suspected hazardous substance waste disposal sites. Also included are sites delisted from the Registry of Inactive Hazardous Waste Disposal Sites and non-Registry sites that U.S. EPA Preliminary Assessment (PA) reports or Site Investigation (SI) reports were prepared. Hazardous Substance Waste Disposal Sites are eligible to be Superfund sites now that the New York State Superfund has been refinanced and changed. This means that the study inventory has served its purpose and will no longer be maintained as a separate entity. The last version of the study inventory is frozen in time. The sites on the study will not automatically be made Superfund sites, rather each site will be further evaluated for listing on the Registry. So overtime they will be added to the registry or not.

VCP: Voluntary Cleanup Agreements

New York established its Voluntary Cleanup Program (VCP) to address the environmental, legal and financial barriers that often hinder the redevelopment and reuse of contaminated properties. The Voluntary Cleanup Program was developed to enhance private sector cleanup of brownfields by enabling parties to remediate sites using private rather than public funds and to reduce the development pressures on "greenfield" sites.

SPDES: State Pollutant Discharge Elimination System

New York State has a state program which has been approved by the United States Environmental Protection Agency for the control of wastewater and stormwater discharges in accordance with the Clean Water Act. Under New York State law the program is known as the State Pollutant Discharge Elimination System (SPDES) and is broader in scope than that required by the Clean Water Act in that it controls point source discharges to groundwaters as well as surface waters.

EDR PROPRIETARY RECORDS

Manufactured Gas Plants: EDR Proprietary Manufactured Gas Plants

The EDR Proprietary Manufactured Gas Plant Database includes records of coal gas plants (manufactured gas plants) compiled by EDR's researchers. Manufactured gas sites were used in the United States from the 1800's to 1950's to produce a gas that could be distributed and used as fuel. These plants used whale oil, rosin, coal, or a mixture of coal, oil, and water that also produced a significant amount of waste. Many of the byproducts of the gas production, such as coal tar (oily waste containing volatile and non-volatile chemicals), sludges, oils and other compounds are potentially hazardous to human health and the environment. The byproduct from this process was frequently disposed of directly at the plant site and can remain or spread slowly, serving as a continuous source of soil and groundwater contamination.

OTHER DATABASE(S)

Depending on the geographic area covered by this report, the data provided in these specialty databases may or may not be complete. For example, the existence of wetlands information data in a specific report does not mean that all wetlands in the area covered by the report are included. Moreover, the absence of any reported wetlands information does not necessarily mean that wetlands do not exist in the area covered by the report.

CT MANIFEST: Hazardous Waste Manifest Data

Facility and manifest data. Manifest is a document that lists and tracks hazardous waste from the generator through transporters to a tsd facility.

Oil/Gas Pipelines: This data was obtained by EDR from the USGS in 1994. It is referred to by USGS as GeoData Digital Line Graphs from 1:100,000-Scale Maps. It was extracted from the transportation category including some oil, but primarily gas pipelines.

Electric Power Transmission Line Data

Source: PennWell Corporation

Telephone: (800) 823-6277

This map includes information copyrighted by PennWell Corporation. This information is provided on a best effort basis and PennWell Corporation does not guarantee its accuracy nor warrant its fitness for any particular purpose. Such information has been reprinted with the permission of PennWell.

Sensitive Receptors: There are individuals deemed sensitive receptors due to their fragile immune systems and special sensitivity to environmental discharges. These sensitive receptors typically include the elderly, the sick, and children. While the location of all sensitive receptors cannot be determined, EDR indicates those buildings and facilities - schools, daycares, hospitals, medical centers, and nursing homes - where individuals who are sensitive receptors are likely to be located.

AHA Hospitals:

Source: American Hospital Association, Inc.

Telephone: 312-280-5991

The database includes a listing of hospitals based on the American Hospital Association's annual survey of hospitals.

Medical Centers: Provider of Services Listing

Source: Centers for Medicare & Medicaid Services

Telephone: 410-786-3000

A listing of hospitals with Medicare provider number, produced by Centers of Medicare & Medicaid Services, a federal agency within the U.S. Department of Health and Human Services.

Nursing Homes

Source: National Institutes of Health

Telephone: 301-594-6248

Information on Medicare and Medicaid certified nursing homes in the United States.

Public Schools

Source: National Center for Education Statistics

Telephone: 202-502-7300

The National Center for Education Statistics' primary database on elementary and secondary public education in the United States. It is a comprehensive, annual, national statistical database of all public elementary and secondary schools and school districts, which contains data that are comparable across all states.

Private Schools
